

Unity Tech Artist sets

As a Tech Artist you are expected to have the knowledge to perform these 2 tasks:

1. creation of Button with states and VFX
2. integration of animation from Spine 2D

Part 1: Launch Button

use the attached materials to create a button that has these animated states to apply this logic :

A. Idle - the button is ready to be tapped on and has a CTA (Call To Action) animation on it (for example: particles, light swipe etc.)

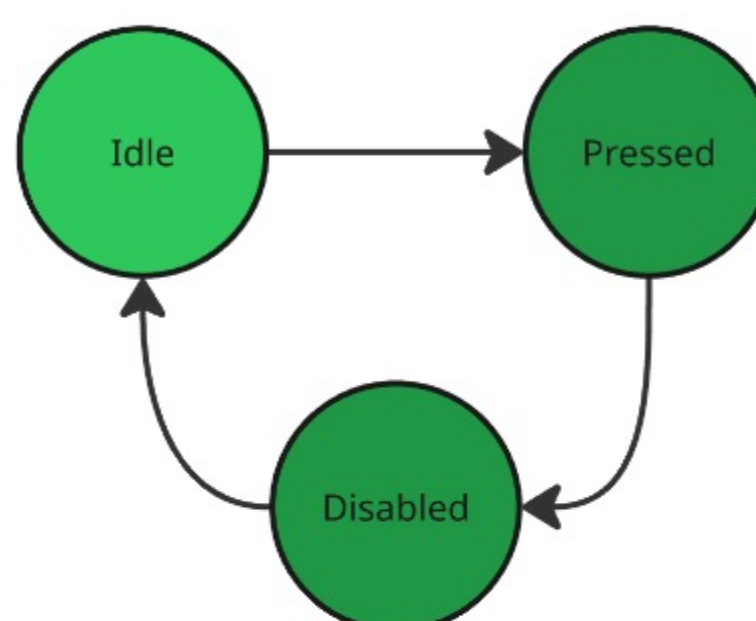

create 2 kind of VFX for the CTA:

- VFX based on sprite sheet
- VFX based on Particles system

B. Pressed - animated feedback: the green part of the button is pressed down.

C. Disabled - the button is disabled at a state of Pressed for 5 sec.

D. Enabled - animated transition to Idle state.

Part 2 : Spine animation

integrate the attached files exported from Spine 2D into a Unity project, create triggers that activates the 2 animations (Idle and Jumping)

delivery requirements:

Unity project containing Launch button with all the states and VFX for CTA

Unity project containing the given animation (Lama test) integrated with trigger for 2 animations

No code is needed

Unity version - 6.2
